

Portable Reading Light for Vehicle

Abstract of the Disclosure

A portable reading light includes an illumination unit, a light base having a battery compartment for receiving a replaceable battery therein to electrically connect to the illumination unit, a light housing, having a transparent window, received in the light housing therein wherein the illumination unit is capable of producing light to outside through the transparent window; and a pivot arm having a coupling end extended from the light housing and a pivot end pivotally connected to the light base in such a manner that the light housing is adapted to pivotally fold the light housing to the light base to form a compact structure. A fastening device is provided at a rear side of the light base for detachably fastening the light body on the user's body.
